

## **About this web site:**

The Mailbox Club is a non-profit Christian ministry established in 1965 as a publisher and distributor of printed Bible correspondence lessons designed for children, youth/teens, and adults. This web site is the presentation of those materials for online study over the Internet in a controlled and interactive format. The studies are available to anyone who has an adequate speed connection to the World Wide Web and a web browser that is able to support the program. The studies available are written for age/grade levels beginning with early readers 4 or 5 years old and progressing upward to adult studies.

The curriculum is presented in the three primary age categories as indicated above and by the "Sign-Up" buttons on the home page. Registration is required for a user/student (Member) to enter the site and do the studies in the controlled and graded steps for which they were designed. Each Member (student) will begin in the studies at the appropriate place as determined by their age/birth date. A specific path is defined for the children, some flexibility of choice is available to the youth/teen group, and even more choices are available to adults who register.

For the children under age 13 the site function is designed in agreement with COPPA rules and we actively seek parent/guardian approval of a child's study of the lessons. If parents/guardians do not exercise their right of choice for the children under their care then access is allowed along with ample opportunity and access for the parent/guardian to withdraw permission at any time. We do not share the personally identifiable information we collect with anyone other than those who need it to maintain the proper function of the site and program.

This web site also offers the opportunity for other ministries, churches, and organizations that are in agreement with The Mailbox Club to have access to our materials online. This "Licensed Partnership" is secured by online application that results in acceptance by The Mailbox Club, the payment of an annual license fee plus a usage fee based on the volume of lessons utilized by the Members of the licensee. The licensee will be able to present the program with their own web presence "skin" while accessing the materials and features of our database engine. A complete set of administrative tools are provided that allow a broad range of customization of the usage and reporting parameters.
